Thank you for your purchase of the ImageNet Bundle of *Deep Learning for Computer Vision with Python!*

1. Please use the above links to download the books, videos, code, and datasets associated with your purchase.

The service I use to handle payments and distribution of digital downloads automatically expires URLs after four days for security reasons, so please download your files now. If your URLs ever expires, no worries, just email me and I can regenerate them for you.

Note: All additional bonus chapters can be found in the "Bonus Bundle" .zip files (i.e., BB_Book.zip and BB_Code.zip). If you are looking for the bonus chapters you can find them there.

2. To enter your shipping information for your hardcopy of DL4CV, see the link in the mail I just sent you.

It may take 3-5 minutes for the email to arrive depending on your email service provider. If you used PayPal to purchase your copy of DL4CV you should check the email address associated with your PayPal address for the email as well.

Have a great day and feel free to email me if you have any questions!

-Adrian

P.S. If you need help getting started with your new purchase, please use the following link:
